WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

RESTRICTED

ANNUAL ADMISSION RATES PER 1,000 AVERAGE STRENGTH, BY WEEKS
FOR CERTAIN RESPIRATORY DISEASES*, VENEREAL DISEASES, & ALL CAUSES,
CONTINENTAL LIMITS OF THE UNITED STATES: 1943-1944

REPORT NO. 110.
PAGE 2

RATE PER 1,000
2000

2000

*INCLUDE: CATARRHAL FEVER, ACUTE; INFLUENZA;
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;
TONSILLITIS, ACUTE (1944 ONLY) PHARYNGITIS, ACUTE (1944 ONLY).

CURRENT TRENDS

In general the trend of admissions for all causes is downward and slightly below the 1943 level. The 1944 curve for respiratory diseases is following a definitely downward trend and also lies below that for 1943. The venereal disease curve, on the other hand, lies well above the 1943 level and appears to be slowly rising.

Influenza and Catarrhal Fever. The trend through this 6th week of 1944 continues downward but at a sharper rate of decrease. This decline followed the peak reached during the week ending 11 Dec, 1943. The rate of 229 for this 6th week is appreciably below the rate for the corresponding week in 1942 and 1943, 344 and 371 respectively. The highest rate for these diseases, 356, was reported for the 9th District; the lowest rate, 135, was reported for the 7th District.

Pneumonia -- Broncho and Lobar. The trend of these infections has been slightly downward since the peak of 8 reached in the week ending Dec. 11, 1943 at the peak of the recent influenza outbreak. The rate of 6 for this 6th week of 1944 compares rather favorably with a rate of 5 for the corresponding week of 1942, and a rate of 7 for the corresponding week of 1943. The 13th District reports the highest rate, 16.

Atypical Pneumonia. The incidence continues above that experienced in 1942 and 1943. After reaching a peak of 7.2 in the 50th week of 1943, synchronously with influenza and catarrhal fever, the curve for this infection showed a leveling off process. The 11th District again shows the highest rate of any of the Districts, a rate of 20.

Measles. At the close of 1943 measles had been on the increase for a period of 9 weeks though it was not until the last week of the year that it rose above the 1942 rate. Since Jan. 1, 1944 the incidence of this disease has been consistently above that for the corresponding periods of 1942 and 1943. The highest rates are being experienced in the 13th and 9th Districts, rates of 49 and 36 respectively.

Scarlet Fever. The rate of 18 for this disease is obviously high. It compares quite unfavorably with a rate for the 6th week of 4 for 1942 and 5.3 for 1943. The upward trend which started in the week ending Aug. 7, 1943 seems to have reached a plateau level for the past 9 weeks. If the 1942 and 1943 seasonal experience is used as a guide, even higher rates for this disease must

CURRENT TRENDS--CONTD.

be expected during the next two months. The 13th District reports the highest rate, 71; the 9th District reports the next highest rate, 33; the lowest rate, 2, is reported from the 4th District.

Acute Rheumatic Fever. As with the scarlet fever, the rate of 5 is obviously high and will very likely continue to rise even higher through the next 4 months. At no time in 1943 did the rate for this disease rise as high as the rate reported for this week. The highest rate, 24, is reported for the 13th District. This rate is twice that of the next highest District, the 9th with a rate of 12. The Potomac & Severn River Commands and the 6th District report no rheumatic fever for this 6th week of the year.

Malaria. Though the incidence of malaria in the Continental Shore Stations quite steadily increased through 1943, due to the importation of cases from abroad, the trend since the beginning of 1944 has been somewhat downward. The rate of 4 for the 6th week of the year is considerably higher than the rate for the corresponding week of 1942 and of 1943 but it is well below the peak of 7.3 reached in the 34th week of 1943.

Meningococcic Meningitis. The incidence of this infection continues well below the incidence for the corresponding period of 1943 though considerably above that of 1942.
